

Agilent Performance at an Affordable Price!

Agilent 1200 Series Gradient HPLC System

The Agilent 1200 Series Gradient system is the ideal Multi-Solvent HPLC Gradient System, offering the most flexibility for your research. The modular system allows you to easily expand your analytical capabilities depending on your research needs. Designed for flexibility and robustness.

This System Offers:

- Agilent HPLC Performance at an Affordable Price
- Agilent Reliability and robustness
- Highest analytical flexibility for your growing needs

The Agilent 1200 Series Gradient HPLC System includes:

- Quaternary gradient pump (including degasser)
- Standard Autosampler
- Thermostating subambient to 80° C Column Compartment
- Variable Wavelength Detector includes standard flow cell
- HPLC 2D Chemstation Software
- Flexible options are available including DAD and Spectral module for ChemStation
- To expand your system further according to your needs, additional upgrades such as special detectors, choice of different software packages and thermostat for autosampler are available as well

To get your quotation, please contact your local Agilent Sales Representative.

Note: existing purchase agreement discount may be applied. Contact your Agilent product specialist for the available trade in credit in local currency.
